

Information sheet

WiFi

Exhibitors' own WiFi transmitters may only transmit in the 2.4 GHz band in accordance with currently applicable standards (802.11 b/g/n); transmission in the 5 GHz band is prohibited. The 5 GHz band is reserved exclusively for Messe Frankfurt in order to allow for the provision of exhibitor-specific solutions. As a result, WiFi transmitters may only transmit on channels 1, 6 or 11, and cannot be configured for automatic channel search. Channel bonding is not permitted, and the maximum channel bandwidth is 20 MHz. The maximum transmission power of the exhibitor's transmitter may not exceed -80 dBm at the edge of the stand. The access point ID (SSID) must show the stand number within the first signs (e.g. H4.0 B42). All settings can be carried out in the access point configuration menu.

All regulations are also applicable for WiFi transmitters in exhibits.

Any transmitters other than WiFi transmitters are prohibited, as they can cause massive disruption to signals. In the event that exhibits require different transmitters, Messe Frankfurt has to be informed in advance.

The operation of WiFi networks that cause interference or disruption is prohibited. Messe Frankfurt reserves the right to shut down these networks.

Detailed information and prices are available in the section Stand technology/ Communication technology/ Internet access at the Shop for Exhibitor Services or at <http://www.messefrankfurt.com/frankfurt/en/aussteller/serviceangebote/standtechnik/wlan.html>.

Exhibitors' own WiFi transmitters must be registered in good time before the start of the exhibition in order to ensure that all rules are complied.
